Scenario: you are a full-time student and a computer technician. For the last week you have been coughing, sneezing, and having slight fevers. You are Working three days a week and school is two days a week. Instead of going to your primary care you would like to just find a testing location for Covit 19.

Task 1: check symptom boxes

Task 2: type in or select information

Task 3: browse for a nearby location

Rating : "Absolutely easy and helpful!" I "love the quick location pop up! "

Changes to be made : The app needs a back button or arrow. It only asks symptoms but not when they start or have you ever been tested for Covid before. I think that should be on a new update or something of the sort!

Keep the same : fast testing center pop-up should stay the same and I also think having a Covid tracker is awesome during this pandemic so the app should be able to stay available to everyone. COVID-19 tracker should be able to continue to down low on any device and be simple and easy to use.
